New Approaches in Drug Design
1º Simpósio Brasileiro em Química Medicinal
Novas Estratégias em Planejamento Racional de Fármacos

Program

November, 11-16, 2001
Caxambu, Minas Gerais – Brazil

Dear Sirs,

Brazil has entered an era where public health has also to deal with the discovery and production of medicines. Dipped in the spirit of collaboration to the public causes, Brazilian scientists are accomplishing several projects of scientific research with the objective of contributing for the development of the Brazilian natural products as source of new potential drugs. Synthetic chemistry efforts are widespread in the Country with many efforts to produce generic drugs and also modifying chemical structures of known drugs.

With the aim of bringing renown Research Scientists to discuss the possibilities Brazil may have in the area of drug design, the First Brazilian Symposium on Medicinal Chemistry is intended to show the world wide state-of-art in the field. Several Brazilian and foreign researchers both from the academy and of the pharmaceutical industry shall be present.

We welcome all of you with the wishes that we be successful in pursuing this.

Thank you very much for coming.
